Minus K Technology Gives Away Negative-Stiffness Vibration Isolators to U.S. Colleges

INGLEWOOD, CA — Minus K® Technology, Inc., manufacture and market our state-of-the-art vibration isolation products based on our patented negative-stiffness technology is giving away \$25,000* of passive Negative-Stiffness low-frequency vibration isolators

The isolators will be given to U.S. colleges for use with AFMs, electron microscopes, interferometers, laser optical systems, micro-hardness testers, and other instruments that would be assisted by passive mechanical vibration isolation.

Recipients are chosen based on the proposed use and applicability of the isolators. For more information contact Steve Varma, Minus K Technology, Inc.; (310) 348-9656. Deadline to apply is February 28, 2027. Entry form and application details are available at www.minusk.com.

**\$25,000 of retail products will consist of at least one each of the following models of Negative-Stiffness vibration isolators: WS-4, BM-1, BM-4, BM-8, BM-10 and CM-1. Based on the information provided within grant forms Minus K may substitute different models to best accommodate the application and payload needs.*
